

This document applies to production, testing, receiving and delivery of LITHOPLAST® INSTAL product.

LITHOPLAST® INSTAL is a single-layer, studded membrane produced from high-density HDPE polyethylene without use of UV stabilizer. Studded LITHOPLAST® INSTAL membrane is available in form of roll and plate.

1. Technical description

▪ Material

Ultimate raw material for production of studded LITHOPLAST® INSTAL membrane is a high-density HDPE polyethylene. Colouring agent is added to input material in course of production.

▪ Lifetime

If the product is not exposed to UV radiation, its lifetime exceeds 50 years.

▪ Appearance

The membrane surface is smooth, with roughness within thickness tolerance limits. The membrane contains regular lines of studs. 10mm wide edges are visible on sides of unwound roll. After unwinding, the roll can show undulation based on ambient temperature. This undulation does not have any impact on product quality, as well as on physical and mechanical features.

The plate is provided with elevated, approx. 20mm big rim on all sides. Reference sample must be approved in advance in case of customer-specific requirements on product appearance.

▪ Color

Studded LITHOPLAST® INSTAL membrane is black.

2. Use

▪ Building industry

In building industry, the LITHOPLAST® INSTAL membrane is used as insulation against moisture and for ventilation according to ČSN EN 13967 (ventilation of anti-radon insulation at or below ground level, intended for high and medium incidence of radon in soil air, additional insulation against radon penetration in existing buildings, recovery membranes for object renovations and their follow-up ventilation, renovation of wet masonry in existing buildings, hidden casing).

Double sided, adhesive butyl rubber tape is used for connecting rolls in membrane folds. Permanent load must be applied on joint. Use of Rapid K1 stapling pliers with RAPID 24/8+ staples is recommended for joining of plates.

▪ Others

LITHOPLAST® INSTAL membrane can be used for protection of woody plants and in management of exhibitions for realization of underfloor installations.

3. Package

- **Roll**
Membrane is wound on rolls. The roll is tied in the middle with polypropylene tape.
- **Plates**
Plates are packed in 10-piece packages. The package is secured against separation using polypropylene tape.

4. Identification

- **Roll**
Each roll is identified with CE label, information tag containing dimensions, and handout with information for end user.
- **Plates**
Each package of plates is identified with CE label, information tag containing dimensions, and handout with information for end user.

5. Handling and Storage

- **Handling**
Studded LITHOPLAST® INSTAL membrane must be transported in vehicles providing sufficient protection of load (e.g. box truck). During the transport, the load must be secured against movements and contamination.
- **Storage**
Studded LITHOPLAST® INSTAL membrane must be stored in the area complying with ČSN 64 0090, i.e. dry, closed, warehouse protected from sunshine, at temperatures between +5°C and 35°C. On the site, the membrane must be protected against UV-radiation and contamination.

6. Warranty

- Warranty and complaints are governed by generally applicable regulations.

7. Disposal

- Polyethylene waste is classified as „other waste“ according to Notice of Ministry of the Environment (MoE) No. 381/2001. Pure waste can be recycled. Contaminated waste must be handled according to the type of contaminant in accordance with Waste Management Law.
- This product is not hazardous in terms of Law No. 350/2011 of Coll. on chemical substances and chemical preparations, as amended.

PRODUCTS

8. Tests, standards and technical specifications

- Product tests and certifications are realized according to harmonized standard ČSN EN 13967 (Waterproofing stripes and membranes - Plastic and rubber stripes, as well as membrane for waterproofing insulation and rubber stripes and membrane for insulation against pressurized water). Individual requirements on product testing and inspection are described in internal operation documents and Production Management System Manual.
- Quality management system is certified according to ČSN EN ISO 9001:2009.

LITHOPLAST® INSTAL

L01

Shaped polyethylene membrane, type V
ventilation membrane for air insulation against moisture

Flammability	NPA
Water-tightness	water-tight at pressure of 60 kPa
Resistance against tearing	NPA
Strength of the joint	NPA
Resistance against impacts	
LITHOPLAST® INSTAL 20/0.8	method A - max 1500mm method B - max 1300mm
LITHOPLAST® INSTAL 80/2.0	method A - max 2000mm method B - max 2000mm
Resistance to tensile stress	NPA
Resistance against static load	NPA
Durability	Water-tightness after artificial weathering, water-tightness after exposure to chemicals - NaCl, Ca(OH) ₂ , H ₂ SO ₃ solutions, water-tight at pressure of 60kPa
Hazardous substances	Ingredients do not contain any hazardous substances.

12. MOREOVER, THE PRODUCT PROVES FOLLOWING FEATURES

Characteristic	Property	Technical specifications
Compression strength		
LITHOPLAST® INSTAL 20/0.8	max 0.10N/mm ²	ČSN EN ISO 604
LITHOPLAST® INSTAL 20/1.0	max 0.14N/mm ²	
LITHOPLAST® INSTAL 40/1.5	max 0.12N/mm ²	
LITHOPLAST® INSTAL 60/1.6	max 0.06N/mm ²	
LITHOPLAST® INSTAL 80/2.0	max 0.05N/mm ²	
Resistance to tensile stress of semiproduct		
method A (thickness 1 mm)		ČSN EN 12311-2
longitudinal direction	700N/50mm	
transversal direction	700N/50mm	
Resistance to tensile stress of semiproduct		
corpuscle according to ISO 1798		ČSN EN 12311-2
longitudinal direction	19N/mm ²	
transversal direction	19N/mm ²	
Drawability, longitudinal	230%	
Drawability, transversal	230%
